UARX Space is an in-space transportation company providing rideshare and dedicated launch services for CubeSats and small satellites. The company was founded by Yanina Hallak and Andrés Villa, both California Polytechnic State University alumni.

From 1 kg to 3500 kg satellites, the UARX Space team has invaluable knowledge analyzing and developing any type of unmanned mission, including onboard software, mass memory, design, structural and thermal analysis, solar panels, radiator antennas, payloads for deep space, project management, systems engineering, integration, and testing.

UARX has become the first Spanish company in developing a CubeSat Deployer.

UARX Space headquarters is located in Nigrán, Galicia, Spain, and has an office in Mar del Plata, Argentina.
